## Making the Case

**Give your audiences reasons to believe when using the shared narrative to tell your story! Use the following resources to identify relevant research supporting the benefits of meaningful outdoor experiences.**

Developed in partnership with Stanford University, [Blue Sky's research briefs](#) summarize academic literature around environmental literacy and impacts on conservation, education, health and wellness, and youth development.

The [Children & Nature Network Research Library](#) provides summaries and citations for hundreds of peer-reviewed research articles that comprise the evidence base for the benefits of connecting with nature. Users can search the library by keywords, population of interest, outcomes, and more.

The [Environmental Education Research Bulletin](#) is a collaborative project between Dr. Nicole Ardoin at Stanford University, ChangeScale, and the North American Association for Environmental Education (NAAEE). The research bulletins synthesize and summarize recently published research pertinent to environmental education, sense of place, environmental behavior, teaching practices, and other relevant topics.
